Important Information
about your pet's
Spay or Neuter Surgery

Spay Surgery –
Removal of the ovaries and uterus of a female dog to prevent pregnancy and uterine infections. If performed before the first heat cycle, it will dramatically reduce the incidence of mammary cancer later in life.

Neuter Surgery –
Removal of the testicles of a male dog. This decreases the development of prostatic disease, testicular cancer and infections, and inhibits secondary sexual behaviors such as marking territory with urine, and seeking female dogs in heat.

About the Surgery –

- Recommended at 4 – 6 months of age
- Patient needs 12 hour fast prior to surgery
- In – out same day of surgery
- Recovery in 3 – 4 days, incision healed in about 10 days
- Pet is...
